

#### **KEY POINTS**

**Swivel Spout** 

Allows the increase of spout rotation of your mixer so you can move the water exactly where you want

Swivel Spout stop The preset stop prevents accidental water splashing on countertops.

Durability tests The cartridge, the active core of your mixer, has a lifetime guarantee of at least 70,000 cycles

All mixer contain ceramic disk cartridge and are tested to 70000 opening/closing movements, this correspond to 10 years of use by an average family of 4. In the tests performed by Gessi the cartridges failed after 200000 opening and closing movements using medium/hard water.

A sample "hammer test" is performed, which consist of the rapid opening of the mixer which exposes the cartridge to a sudden shock caused by the water pressure. The test is classified as a pass when the cartridge still operates when opened at a water pressure of up to 50 bar.

Swivel aerator

Increases the range of your mixer

New New Design

Extractible handshower Increases the range of operation of your mixer allowing an extensive use of the kitchen faucet.

**Gessi Fiter System** The flexible water supplies incorporate a special filter tap (easy to disassemble and clean) that avoid infiltration and impurity. They protect the internal parts from excessive deterioration

Double jet shower

Operating Range of the faucet larger thanks to the easy transition between the soft aerated water flow and the forceful jet spray action.

Window installation Thanks to Gessi's retractable under window system the height of the mixer spout does not obstruct the opening of the window

**SuperFlex** 

The flexible spout allows ease of movement

**Gessi Up & Down System** Thanks to our Sliding Spout System you can lower the spout easily. This system is great for installation under windows and has been designed and engineered specifically for this application

Gessi Softmove Thanks to Gessi's swivelling spout system the spout rotation is much more comfortable and

**LED Color Water Feature** Thanks to the special LED, the color of the water is temperature controlled, Blue for cold, violet for temperate and Red for hot

**Easy Clean Aerator** Remove limestone residue easily

Dymano System Thanks to the special LED, the energy required to illuminate the LED lights are created by an internal turbine in the water supply

Easy Clean Thanks to the EASY CLEAN SYSTEM cleaning your mixer will be easier and faster

Food Safety All components used in our faucets, including the cartridge, are safe for contact with food and do not affect the quality or taste of the water

**Gessi Shine Surface** The special Gessi plating process ensures surfaces are resistant to stains guaranteeing a long lasting and durable sheen to your finish

#### WARRANTY

Abey Australia warrants to the original purchaser of the Gessi Kitchen Tapware product that under proper care, domestic/residential use and maintenance the product supplied will be free from defects in workmanship and materials for a period of 7 years for the cartridge and 5 years for parts and labour. This warranty is subject to the terms and conditions on Abey's website www.abey.com.au.

# The pursuit of excellence Ethics, Research and Quality

Gessi is one uncompromisingly Italian company that pursues fully integrated manufacturing of its designs including every component and process within the Gessi Park, an oasis-like verdant compound where the Company has adopted the very best practices in the business.

In fact Gessi has been seriously involved in researching and developing technological and technical solutions for its products and processes for years. These aimed at reducing consumption and minimizing environmental impact, while maintaining the highest levels of aesthetic design and offering ever new and innovative value added solutions.

This value setting gives rise to "technologically handcrafted" objects, a subtle oxymoron used to express the unique combination of high-tech manufacturing techniques with the wisdom of passionate craft specialists.

#### **FINISHINGS**

#### **BLACK OR WHITE**

After subjecting the article to a preliminary sand blasting it is double-coated, first with bi-component epoxy primer left to rest for up to 24 hours, and then with bi-component acrylic enamels dried in ovens at 90 ° C.

This process ensures perfect uniformity of the surface and a high scratch resistance to the finishing. Before boxing, 100% of the product is subjected to a strict visual inspection for flawless quality.

#### **CHROME PLATING**

A 10 micron thick nickel layer and a 0,3 micron thick chrome layer are deposited, which is the maximum thickness achievable. This makes our product above average in the industry, this means the chrome is brighter and has a longer life. The thickness of the chrome means no risk of any translucent effect which could show the underlying brass.

#### **BRUSHED NICKEL**

A 6 micron nickel layer and a 0,3 micron Finox layer are deposited, which is the maximum thickness achievable. Again this makes our product above average in the industry, The stainless steel plating is in fact similar to steel and longer lasting. The thickness of the chrome avoids corrosion of the mixer and increases durability.
